

Finally a language test battery for multilingual children

in the **SPEAK** project (**SP**rachdiagnostik bei **mehrsprachigen K**indern)

Is your child growing up multilingual? Then we are looking for you!

And ask to take part in a study to validate the test battery!

For our **SPEAK** project we are looking for

- Monolingual and multilingual children between the ages of 4 and 8
- At least 6 months contact with German

What are we doing?

We are developing a new language test, the **TEBIK 4-8**.

Among other things, the children have to repeat artificial words and sentences, name pictures and tell a picture story.

Why is this important?

Multilingual children learn German and another language. As a result, many multilingual children hear and use German less often than monolingual children.

To date, there is no language test that takes multilingualism into account at an early stage. As a result, many multilingual children are wrongly assessed as having language problems or genuine language disorders are not recognised. We want to change that! The tasks in our test therefore contain pictures and words that all children recognise.

We know that multilingual children can solve our tasks well.

What's in it for you?

You or your child have no direct advantage if you take part in the study. Your child will receive a small gift as a thank you. In the long term, you will help to children to learn German better.
